

Nitrogen Blanketing Solutions for Superior Product Integrity

Easy installation and operation

Suitable for wide and dynamic flow profile

Tank level control/ flow monitoring available

High control accuracy

Ultra low maintenance

Customizable

Fieldbus ready

Burkert USA Corp

11425 Mt. Holly-Huntersville Rd

Flow & Level Control

Control Cabinet
Process Cabinet
Breather Valve
Blanket Pressure Transmitter
Flow sensor
Hydrostatic Level Transmitter
Control Valve

Can be combined with

Type 8008

N₂ flow meter
(for N₂ consumption)

Type 8020/30

Paddle-wheel flow sensor
(for flow)

Type 3323

Fully electric driven elec-
tro-motive control valve

Type 8802-YG/DF

Control valve
(for continuous level
control- reduces N₂ usage)

Control Panel

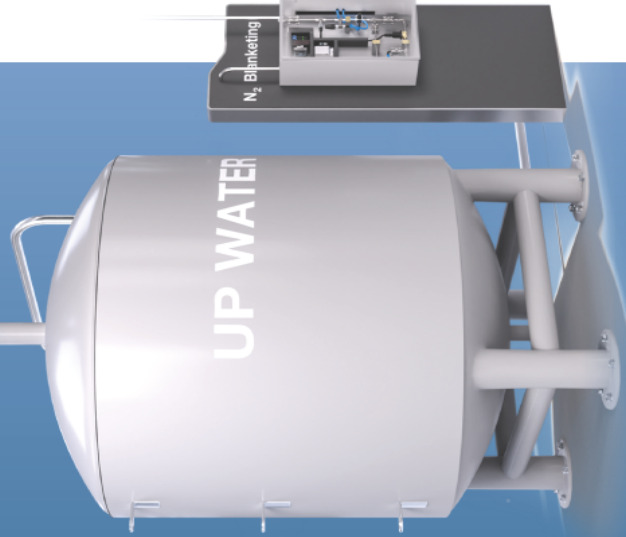

- Graphic display of time elapsed and touch functionality for entering process parameters and executing configurable actions (7" display)
- Easy integration in the process control level through system-specific device description files
- Graphical programming for automation of sub-systems

Bürkert expertise

Digitalisation & process automation/

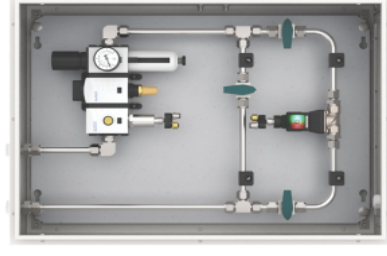

Flow measurement and control

AUTOMATIC NITROGEN

DOSING

Bürkert solution for automatic nitrogen dosing with optimal level and flow measurement prevents contamination of the D.I. water and also ensures that the resistance value of ultra-pure water remains stable at 18.3 MΩ.cm.

Process Panel

- Low hysteresis and high repeatability
- Access to measured value, device status and settings via the CANopen interface Graphical programming for automation of sub-systems
