

Training & Education Service Offering by Bürkert

Training Programs Customizable for Your Specific Requirements

Bürkert USA offers a comprehensive portfolio of training and optimization services designed to keep your processes running safely, reliably, and efficiently. Each program is tailored to your facility, your people, and your industry to maximize uptime and return on investment.

Facility start-up training

Bürkert specialists support your team during commissioning with structured start-up training focused on correct installation, configuration, and operation of Bürkert systems. This hands-on approach helps your staff gain confidence quickly, reduce start-up risk, and establish best practices from day one.

Maintenance and service programs

Dedicated maintenance training programs teach your technicians how to troubleshoot, service, and optimize Bürkert valves, sensors, and automation solutions over the entire lifecycle. When combined with preventive maintenance packages, this know-how helps minimize unplanned downtime and extend asset life.

Product and industry specific training

From valve technology fundamentals to application-focused sessions for hygienic, pharmaceutical, water, or industrial environments, Bürkert delivers targeted courses aligned with your processes. Content can be customized to your installed base and production challenges, ensuring your team can translate training directly into operational improvements.

Site efficiency and optimization programs

Site efficiency programs connect training with practical audits and recommendations to enhance throughput, energy use, and media consumption. By combining field experience with application expertise, Bürkert helps you identify bottlenecks, implement control improvements, and continuously raise the performance of your plant.

Let's customize the right educational & training program for your organization.

Facility start-up training Key Benefits

- Accelerate time-to-production with structured, on-site training that shortens the learning curve for new systems.
- Reduce start-up errors and rework through clear, standardized procedures for installation, configuration, and operation.
- Build operator confidence with hands-on guidance tailored to your actual process conditions and control philosophy.
- Establish a strong foundation for future optimization by embedding Bürkert best practices from day one.

Maintenance and service program training

- Lower unplanned downtime by equipping technicians with practical troubleshooting skills and clear diagnostic routines.
- Extend asset life with training that reinforces correct maintenance intervals, parts handling, and calibration practices.
- Improve safety and compliance by standardizing service procedures across shifts and locations.
- Reduce total cost of ownership through proactive maintenance strategies aligned with Bürkert's lifecycle expertise.

Site efficiency and optimization education

- Unlock hidden capacity by pairing training with on-site audits that highlight bottlenecks and control issues.
- Reduce energy and media consumption through data-driven recommendations on setpoints, control strategies, and hardware usage.
- Improve overall equipment effectiveness (OEE) by systematically targeting losses in availability, performance, and quality.
- Create a culture of continuous improvement by giving your team the tools and know-how to sustain gains after the program ends.

Product and industry specific training advantages

- Close skills gaps quickly with training that directly reflects your installed Bürkert portfolio and process requirements.
- Increase process reliability by deepening understanding of valve, sensor, and automation behavior in your application.
- Support regulatory and quality goals with content tailored to hygienic, pharmaceutical, water, or industrial standards.
- Enable faster decision-making on the plant floor by empowering teams with relevant, real-world examples from their industry.
